

Proyecto Final

Ecosistema de Automatización IA para Gestión Automatizada de Solicitudes de Códigos de Verificación

Alumno: Ignacio Negretti Dietrich

Curso: Automatización IA

Herramientas utilizadas:

- Make
- Airtable
- Groq (LLM)
- Microsoft 365 Outlook
- Telegram Bot

1. Introducción

Objetivo

El objetivo del proyecto consiste en desarrollar un ecosistema de automatización basado en Inteligencia Artificial capaz de gestionar solicitudes de códigos de verificación de manera automática, disminuyendo la intervención humana, reduciendo tiempos de respuesta y manteniendo un registro completo del proceso.

El sistema recibe solicitudes mediante Telegram, válida la autorización del usuario utilizando una base de datos, consulta el correo electrónico para obtener el código solicitado y responde automáticamente al usuario.

Toda la información queda registrada en Airtable para permitir auditoría y seguimiento.

Aclaración: Parte del proceso fue iniciado y desarrollado con una cuenta de make que se quedo sin créditos casi al final de la fecha de entrega. Por ello se creo otra cuenta y en ella se realizo una copia y se ajustaron ciertos detalles.

2. Problema de negocio

Para este caso específico tome una problemática que tenemos en mi familia (..y probablemente en muchas otras) que es la cuenta de netflix y la limitación de su uso sólo remitiéndose al domicilio del titular. Para solventar esta situación había 2 opciones crear un miembro (lo que significa que se tiene que pagar) o la entrega de códigos de verificación requiere que un operador:

- reciba el pedido
- verifique permisos
- ingrese al correo
- busque el mensaje correcto
- copie el código
- responda al usuario

Este procedimiento consume tiempo, puede generar tardanzas y no está excepto de la posibilidad de errores.

La solución propuesta automatiza completamente dicho proceso.

3. Objetivos

Objetivo general

Automatizar el proceso de entrega de códigos de verificación utilizando IA y múltiples servicios integrados.

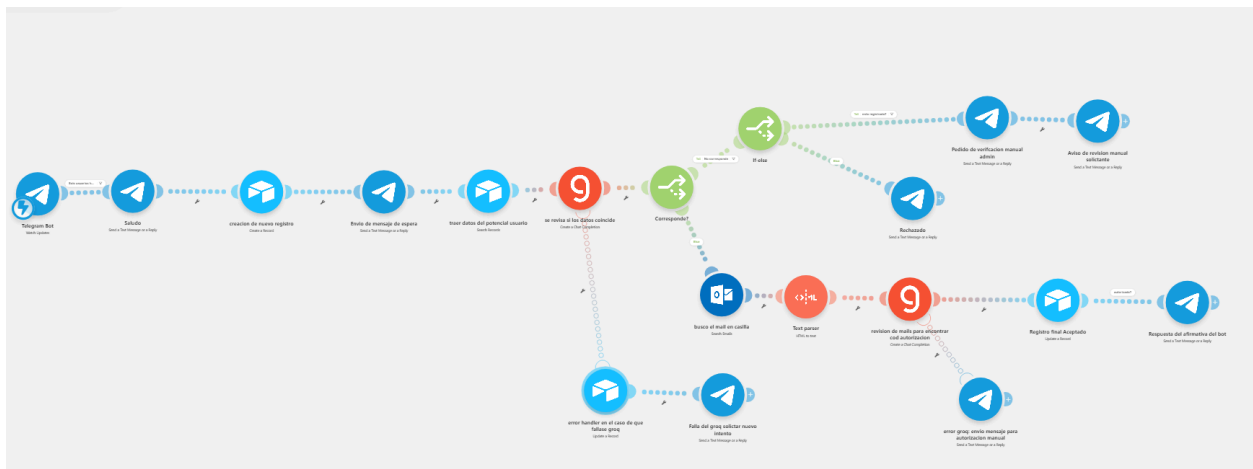

Objetivos específicos

- Validar usuarios automáticamente.
- Consultar una base de datos.
- Interpretar lenguaje natural mediante IA.
- Obtener información desde Outlook.
- Extraer el código correcto.
- Registrar todas las operaciones.
- Gestionar errores automáticamente.

4. Justificación estratégica

La automatización permite reducir tiempos de respuesta, disminuir errores operativos y liberar tiempo del administrador para tareas de mayor valor agregado. Además, la centralización de registros en Airtable permite auditoría y trazabilidad completa de cada solicitud.

5. Arquitectura del sistema

El sistema se encuentra compuesto por cinco componentes principales:

- Telegram como canal de entrada y salida.
- Airtable como base de datos.
- Make como orquestador.
- Groq como motor de IA.
- Outlook como fuente de los códigos de verificación.

Telegram

Make

Airtable

Groq

Outlook

Groq

Telegram

Airtable

6. Tecnologías utilizadas

Tecnología

Función

Motivo

Make	Orquestador principal	Mas sencilla la configuracion
Airtable	Base de datos	Mas sencilla la configuracion
Groq	Procesamiento IA	Se tenia mas experiencia con el mismo y el modelo instant ya cumplia con los requisitos
Telegram	Interfaz con el usuario	Los bots son grauitos
Outlook	Obtención de códigos	La cuenta de netflix estaba configurada con un correo de hotmal

7. Base de datos

Explicar las dos tablas.

Tabla Conversaciones

Campos:

- OperationID
- ChatID
- Estado
- Fecha
- Motivo
- Autorización
- Relación con Autorizaciones

Tabla Autorizaciones

Campos:

- AutorizacionID
- ChatID
- Contraseña

Explicar que ambas tablas están relacionadas mediante un campo **Link to another record**, permitiendo mantener la integridad de la información y evitar registros aislados.

8. Descripción del flujo

Etapa 1

Recepción del mensaje por Telegram.

Etapa 2

Creación del registro inicial en Airtable.

Etapa 3

Consulta de autorizaciones.

Etapa 4

Primer procesamiento mediante IA.

La IA determina si el usuario se encuentra autorizado.

Etapa 5

Si no corresponde:

- se informa al usuario
- se registra el motivo
- finaliza el proceso

Etapa 6

Si corresponde:

- búsqueda del correo
- extracción del contenido

- conversión HTML → Texto

Etapa 7

Segundo procesamiento mediante IA.

La IA identifica el código de verificación dentro del correo.

Etapa 8

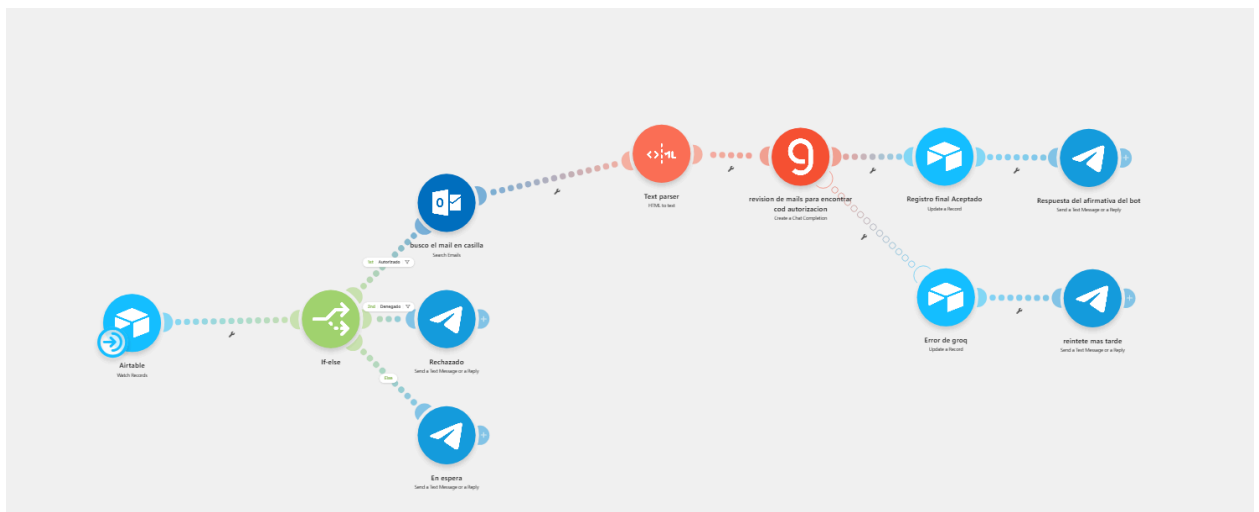

Respuesta al usuario mediante Telegram.

Etapa 9

Actualización del registro en Airtable.

9. Human In The Loop

El proceso incorpora una etapa de validación humana obligatoria mediante 2 escenarios. Cuando un usuario solicita un código pero no pone bien la contraseña, el sistema retiene la solicitud en Airtable con estado "Esperando autorización". Un administrador recibe una notificación mediante telegram y debe modificar manualmente el estado del registro a "Autorizado" o "Denegado" en airtable. El segundo escenario monitorea solo el registro conversaciones de Airtable y solo continúa el flujo cuando existe una decisión humana explícita que deniega o aprueba el pedido.

10. Manejo de errores

El flujo implementa mecanismos de resiliencia mediante:

- Error Handler.
- Registro del error.
- Actualización del estado.
- Registro del motivo.
- Continuidad controlada del flujo.

Los mismos se usan ante posibles errores con los módulos de groq.

Primer módulo de groq:

Al no estar tan avanzado directamente deniega la ejecución.

error handler en el caso de que
fallase groq
Update a Record

mediately as data arriv

Segundo módulo al estar mas avanzado pide verificación manual y continua con el siguiente escenario.

The image shows a Telegram Bot configuration interface with a flowchart overlay on the left. The flowchart includes a Telegram logo, a red circle with the number '9', and text in Spanish: 'le mails para encontrar id autorizacion', 'error groq: envio mensaje pa autorizacion manual', and 'Send a Text Message or a Reply'. The configuration form on the right is titled 'Telegram Bot' and contains the following sections:

- Connection ***: A dropdown menu showing 'My Telegram Bot connection'. A lightbulb icon indicates: 'For more information on how to create a connection to Telegram Bot, see the [online Help](#).'
- Chat ID ***: A text input field containing '7367209193'. A lightbulb icon indicates: 'Enter the unique identifier for the target chat or usernar the target channel (in the format @channelusername, or @supergroupusername).'
- Text ***: A text input field containing 'Telegram al administrador' and 'Chat: first_name Chat: last_name esta pidiendo codigo de autorizacion'. Below it, a 'Responder:' section shows '/aprobar 25', 'o', and '/denegar 25"'. A lightbulb icon indicates: 'Enter or map the message text to send.'
- Message Thread ID**: An empty text input field. A lightbulb icon indicates: 'Unique identifier for the target message thread (to forum. For forum supergroups only.'
- Parse Mode**: An empty text input field.

11. Resultados obtenidos

Durante las pruebas realizadas se verificó el correcto funcionamiento de los siguientes escenarios:

✓ Usuario autorizado.

- ✓ Usuario no autorizado.
- ✓ Contraseña incorrecta.
- ✓ Extracción correcta del código.
- ✓ Actualización de Airtable.
- ✓ Manejo de errores del modelo IA.

12. Métricas de negocio

Métrica	Antes	Después
Tiempo promedio	5 min - 2 hs	15-30 seg
Intervención humana	100%	<10%
Registro histórico	No	Sí
Escalabilidad	Baja	Alta

Antes

Proceso manual.

Tiempo promedio:

5 minutos a 2 horas por solicitud.

Después

Proceso automático.

Tiempo:

15–30 segundos.

Beneficios

- Reducción del tiempo de atención.
- Menor intervención humana.
- Mayor trazabilidad.
- Registro histórico.
- Escalabilidad.
- Disminución de errores.
- No tener que pagar 5000 ars extra al mes

13.Matriz Impacto / Esfuerzo

Mejora	Impacto	Esfuerzo
Validación automática	Alto	Medio
Extracción automática de códigos	Alto	Medio
Registro en Airtable	Medio	Bajo
Human In The Loop	Alto	Medio
Manejo de errores	Alto	Medio

14. Conclusión

El proyecto permitió integrar múltiples plataformas dentro de un ecosistema de automatización basado en Inteligencia Artificial.

La solución desarrollada demuestra la viabilidad de automatizar procesos de atención y recuperación de información utilizando un orquestador, una base de datos, un modelo de lenguaje y servicios de comunicación, manteniendo trazabilidad, resiliencia y capacidad de crecimiento.
